The Power of Nature in Your Hands

VITAFOL™

ND Pharma & Biotech Science for Nutrition Health

Product Benefits

- 7 times more bioavailable than folic acid.
- Not affected by MTHFR polymorphism.
- More efficient inner erythrocyte folate content.
- Improvement of homocysteine metabolism.

In foods, approximately 80% of folates are in the form polyglutamates (present in various forms according to its oxidation state and substitution), which during digestion and metabolism are reduced to dihydrofolate (DHF) or tetrahydrofolate (THF). The liver is the best source because folates is the most active form , 5 - metilTHF3 .

Folic acid, understood as pteroylmonoglutamic acid, is fully oxidized and that is the synthetic form that normally appears in supplements and enriched or fortified foods. But never in significant amounts naturally.

The Power of Nature in Your Hands

VITAFOL™

When we intake the synthetic form or other folates, our body should make an important effort in order to metabolize it, completing four different stages before reaching its biologically active form, known as L-methyl (L-methyltetrahydrofolate).

The last stage of these four reactions and biotransformation is regulated by the enzyme called methylenetetrahydrofolate reductase (MTHFR).

Individuals with genetic polymorphisms of the specific gene responsible for coding the MTHFR C677T, may not be able to use or properly metabolize folates.

It's estimated that between 10-20% of the general population may have inherited two copies (homozygous TT) of the abnormal gene. Another estimated 40-60% of the population may have inherited only one copy (heterozygous CT).

In these polymorphisms MTHFR enzyme seems to work in a limited way, converting only a small part of folates and folic acid into L-methylfolate².

Those affected by this condition will need to increase the consumption of folates in foods or supplementing the diet with L-methyl forms, but never ingesting synthetic folic acid in high doses, mostly because this form of folic acid may not be active within the body and could possibly become accumulated with different negative health consequences.

Folic acid acts as a coenzyme in:

- Different events related to the synthesis of nucleic acids.
- Metabolism and protein synthesis (with vitamin C and B12).
- Production of red blood cells, DNA synthesis and tissue growth.
- Also plays an important role in cardiovascular, cerebrovascular and nervous health system by decreasing excess homocysteine.

ND Pharma & Biotech is a biopharmaceutical company that discovers, develops and commercializes innovative products and therapeutics in areas of unmet medical, food, nutritional, agro, industrial and many other needs. The company mission is to advance the care of people suffering from certain diseases, worldwide and to make life better promoting green chemistry issues and removing certain chemical toxics from our daily lives. Company also acts as a chemical supplier and molecular provider including certain rare molecules and hard-to find compounds, APIs Intermediates, Reactives, etc. Headquartered in Surrey, England, UK, ND Pharma & Biotech Company has operations worldwide thru a network of commercial and industrial partners, both companies and/or corporations.

PreserFood, Acarisin, Moldstop, Mycostop, Glaice, Lactolife, Acqualife, SterilFood, Fruitfresh, Kangen, Alkiow, Noceptill, Noogluti, Inofish, Zoeltar, Bacterskin, Bacterskin 5000, Pindolipol, Veri-K and Veri-K Series, X-Fresh, Acnifol, Glucospart, Mitoprotect, Citrusol, Inusol, Stevisol, Sucrasol, Acek, 250, PureATP, Aminoprot 100, Asparsol, EcoEff, Anisakill, Calclor, Ferristat, Chiknsafe, Cocqwa, Maltolan DRM, Monki, Peppersol, Reduxalt, Vegafresh, Sugar 50, Sugar 20, Florafresh, FishFresh, Zellitem, Tancream, Psoriacrem, Ovofresh, Xantamar, Mohostop, PS454 Nitroboost, PS452 Glicobost, M.A.R.S. (Micro Alcohol Reaction System) and many others, are registered trademarks of ND Pharma & Biotech Co. Ltd. And/or some of its related companies. Marks may not be available everywhere.
